

# dab:Link

SAP

Automation

Shortcuts

Put an end to click parcours: With our dab:Link application, we seamlessly integrate analytic results with your SAP system. You get clarity faster - and benefit from many other useful functions.

## Business challenge

Time-consuming search for SAP information

Data evaluations are part of everyday work in more and more departments. Discrepancies or questions about posting data regularly arise: Is the double entry a false positive? Which products have key accounts purchased? Which sales tax regulations apply to this supplier? Until now, users had to descend into the depths of the SAP system to find answers.

- 01 Sharing results with colleagues takes time
- 02 Copying and pasting key values is annoying
- 03 Searching and checking transactions in the SAP system is time-consuming
- 04 Manual checks with copy & paste are prone to errors

## The solution

dab:Link leads directly to the transaction

A one-time configuration is sufficient, after which dab:Link automatically links results in your analytic program

Microsoft Excel

Power BI

Webbrowser

HighBond

with the respective SAP transaction.

**No need for SAP know-how:** Click on the value to return directly to the corresponding transaction in the SAP system

**Easy exchange with colleagues:** Copyable links for forwarding via messenger or email applications

## Our features

### Link history

Access to already used links and time saving in consultation with colleagues

### GDPDR compliant

Compliance with applicable data protection regulations, as the application does not transmit personal data

### Integration

Use with all programmes that support external links

### Intuitive user interface

Even faster work thanks to optimised user guidance

### Note function

Easy collaboration with colleagues with the help of a comment function

### Stand-alone

Stand-alone application, detached from the use of other dab products

dab:Link is the key application for companies that want to establish an optimized analytics workflow - from data extraction to evaluation in third-party programs and transfer back into the ERP system.
